

Fact #6

Wool felt's natural properties

Fraster's wool felt is a genuine natural product; made of pure wool using a technique that has been used for thousands of years. Only steam, elbow grease and the occasional color is added.

The wool itself and the subsequent manufacturing process to finished felt provides numerous appealing properties.

1. Resilient form

Wool felt is extremely resilient and durable. It retains its strength and shape for decades without unravelling or fraying. At the same time, wool always returns to its natural shape so that impressions from furniture, for example, will automatically disappear from felt carpets after a short time.

2. Tear resistant

Wool felt is tear resistant and holds a nice, clean edge. The felt can also be cut into any size and shape.

3. Water repellent

Wool is naturally water repellent. Spilled liquids can thus be easily dried / wiped away without leaving stains or spots.

4. Flame retardant

Wool is naturally flame retardant. It is difficult to ignite, does not melt and has good self-extinguishing properties.

5. Noise reducing

The acoustic properties of felt makes the material particularly useful as a noise reduction and sound-insulating material. Similarly, felt effectively reduces vibrations and is therefore suitable for reducing the sound of footsteps and increasing the walking comfort in a room.

6. Insulating

Wool felt provides any room with a natural warmth, and also has outstanding insulating properties.

7. Antistatic

Wool prevents the formation of static electricity. Felt products from Fraster will therefore not attract lint, debris and dust, reducing the need for frequent cleaning.

8. Allergy-friendly

Wool is resistant to the kinds of bacteria, mold and mildew that are among the most common causes of allergic reactions for many people. Moreover, the wool felt naturally absorbs a wide range of harmful pollutants from the air and retains them. It is estimated that using wool as an interior element will help to clean the air for 30 years.

9. Sustainable

Wool felt is a sustainable and 100% biodegradable material.
